Interactive Cover Letter & Portfolio: <https://sydoryk.com/kindred-motorworks>

I have extensive experience creating hyper-realistic visualizations, building automated colorway pipelines, and preparing assets for interactive web configurators. For Kindred Motorworks' bespoke Bronco builds, I can deliver crisp, studio-grade imagery across every model, color code, and custom body option with complete visual consistency.

Proposed Workflow

- **CAD Ingestion & Mesh Preparation:** Ingest your native 3D CAD models (STEP, IGES, Rhino, SolidWorks, or Alias). Tessellate the NURBS surfaces into clean, high-density geometry with seamless body panel curvature, precise shut lines, and authentic bevels.
- **Automated Colorways & Shader Library:** Set up procedural automotive shaders matching your exact OEM/custom color codes, including multi-coat metallic fleck, clearcoat depth, satin finishes, chrome trim, textured plastics, and interior leather/stitching.
- **Studio Lighting & Angle Consistency:** Establish a dedicated virtual lighting rig with softbox reflections tailored to accentuate the Bronco's iconic body lines. Every model and color variant will be rendered from locked camera angles on a unified background for seamless transitions.
- **Interactive 360° & 3D Viewer Options:**
 - **Prerendered 360° Sequences:** Multi-frame raytraced image sequences allowing customers to drag and spin the vehicle smoothly with photorealistic raytraced reflections and instant color switching (see live examples: [Microphone 360 Viewer](#), [Headphones 360 Viewer](#)).
 - **Real-Time 3D WebGL Configurator:** Optimized real-time 3D assets for interactive 3D browser inspection with orbit, zoom, and live part customization (see live demo: [3D Fabric Configurator](#)).
- **Post-Processing & Delivery Pipeline:** Utilize Nuke for automated batch compositing, color correction, and alpha channel generation (transparent or solid backdrop) to output optimized, web-ready WebP/JPEG files.

3D Asset Availability & Modeling from Reference

- **Do you have 3D CAD models ready?** If you already have 3D CAD files for the Bronco models, hardtop/soft-top variations, wheels, and trim options, we can immediately begin shader calibration and rendering.
- **Custom Modeling from Reference:** If 3D CAD files are not available for certain body modifications or accessories, I can build high-accuracy 3D models from 2D CAD blueprints and photographic reference. Please note that building geometry from scratch will add extra modeling time compared to working directly with existing CAD data.

Software Stack & Production Pipeline

- **Primary 3D & Rendering:** Houdini (Solaris / Karma) for procedural lookdev, lighting, and batch colorway rendering.
- **Compositing & Post-Production:** Nuke for pixel-level color calibration, reflections balancing, and automated batch output.
- **Real-Time Web 3D (if needed):** Three.js / WebGL optimization and texture baking.

I am available to start immediately on a pilot test angle or colorway to establish the visual baseline for Kindred Motorworks.

Best regards,
Sydoryk Oleh
