Hi,

You can view my full resume here: [Resume \(PDF\)](#)

I am writing to express my interest in the QA Engineer position at AVSystem. With my strong foundation in software development, automation, and systems engineering, I am well-equipped to help ensure the quality and reliability of the Coiote DM platform. You can view examples of my technical code on my [GitHub](#).

My background strongly aligns with your requirements for automated and manual testing. I have hands-on experience using JavaScript and TypeScript, alongside a solid grasp of OOP concepts, HTML, CSS, and HTTP/REST fundamentals. I am highly comfortable building and maintaining automation workflows, and eager to apply my scripting skills toward expanding your E2E test coverage with tools like TestCafe.

Furthermore, I have practical experience with CI/CD pipelines, Docker, and Git. My strong understanding of networking and database concepts, particularly within Linux environments, allows me to effectively verify complex integrations and troubleshoot issues. I am highly detail-oriented, proactive in clarifying expected behaviors, and dedicated to upholding a strong quality culture within a cross-functional team.

I am based in Krakow, fluent in both Polish and English, and fully available for the hybrid work model. I would love to discuss how my combination of testing mindset, programming skills, and networking knowledge can contribute to the continued success of AVSystem's global IoT platform.

Cheers,
Oleh
