Hi,

You can view my full resumes here: [LRC Resume \(PDF\)](#) | [Technical Artist Resume \(PDF\)](#)

I have over 9 years of experience in full CG production, real-time pipelines, and procedural workflows, primarily working at a lead/supervisor level.

At my previous position, I led the transition of our traditional rendering pipeline to a real-time engine environment. While my most recent deep-dive has been in Unreal Engine 5, I am highly adaptable and the core concepts of asset integration, optimization, shaders, and pipeline architecture transfer perfectly to Unity. I was responsible for establishing core project structures, creating master materials, and resolving complex engine performance bottlenecks.

Beyond art and engine work, I have deep experience in IT and DevSecOps for creative studios. I've architected render farms, managed workstation lifecycles, and engineered custom Python pipelines for cross-network file validation, directory organization, and automation. My technical skillset also includes strong proficiency in Git, Shell Scripting, Houdini VEX, and Adobe Photoshop, and I have experience collaborating with animators using tools like Spine. Organizing project folders and empowering artists with smooth workflows is something I do naturally.

I'm currently based in Krakow, Poland. I would love to continue this conversation so we can figure out which of my skills you need the most and how I can best contribute to your team.

Cheers,

Oleh
