Hi,

I have over 9 years of experience managing IT infrastructure, automating systems, and troubleshooting complex technical pipelines. While my background is deeply rooted in DevSecOps and technical production, my strong foundation in Linux environments, networking, and programming makes me eager to transition into the embedded and IoT space with AVSystem. You can find examples of my automation and programming projects on my [GitHub](#).

Beyond art, I have deep experience in IT and DevSecOps for creative studios. I've architected and managed multi-node on-premise server farms, managed workstation lifecycles (Linux/Windows), and engineered custom Python pipelines for cross-network file validation and automation. I am highly comfortable with networking fundamentals (IP, TCP/UDP), having implemented secure remote access and maintained Docker and GitOps workflows for high-availability servers.

While I might not have direct commercial experience with Anjay SDK, LWM2M, or advanced C programming for constrained environments, I learn quickly and hope you can see my deep systems administration and troubleshooting expertise as a strong bridge to this role. I spend a significant amount of time debugging complex bottlenecks and I am confident I can quickly adapt to support your IoT integrations.

I am fluent in Polish (C1) and English (B2+), and I am currently based in Krakow, fully available for the hybrid work setup. I would love to continue this conversation so we can figure out which of my skills you need the most and how I can best contribute to your team.

Cheers,
Oleh
