Hi,

You can view my full resume here: [Resume \(PDF\)](#)

I am writing to express my interest in the Integration Software Engineer position at AVSystem. With my strong foundation in both software development and systems engineering, I am well-equipped to help customize your Unified Management Platform and implement robust REST API integrations. You can view examples of my technical code on my [GitHub](#).

My technical background aligns perfectly with your requirements for navigating Linux environments and developing with Python. I have hands-on experience building REST APIs, managing multi-node server infrastructure, and automating workflows with Docker and scripting. Additionally, I possess a solid understanding of core networking concepts—including TCP/UDP, HTTP(S), and IP—and I am highly comfortable using CLI tools like curl, ssh, and tcpdump to diagnose complex network issues.

I am a rapid learner and highly detail-oriented, and I would be eager to expand my knowledge into your in-house Scala-based language. Beyond my technical skills, I have a strong customer-focused mindset. I am comfortable communicating directly with clients in English, gathering their requirements, and providing effective post-delivery technical support to ensure the reliability of their systems.

I am based in Krakow and fully available for a hybrid work model. I would love to discuss how my combination of programming skills, networking knowledge, and problem-solving abilities can contribute to the success of AVSystem's telco solutions.

Cheers,

Oleh
