Hi,

You can view my full resume here: [Resume \(PDF\)](#)

I have a strong background in IT support, systems engineering, and workflow automation. I specialize in bridging traditional IT with modern DevOps practices, leveraging scripting, containerization, and integrating advanced AI into daily operations to maximize efficiency. You can view examples of my technical code on my [GitHub](#).

My technical foundation aligns strongly with your needs for navigating Linux environments, troubleshooting connectivity, and utilizing command line tools and log analysis. I have hands-on experience configuring network protocols, managing multi-node server infrastructure, and automating script execution with Docker and Python. I'm highly comfortable diagnosing complex issues and exploring REST API integrations.

While I am actively expanding my domain knowledge in dedicated IoT protocols, my networking skills and experience with IT monitoring systems position me to quickly adapt to enterprise IoT solutions. I am eager to apply my analytical troubleshooting skills to prioritize support tickets, collaborate with your 2nd/3rd line teams, and contribute to the AVSystem knowledge base.

I am based in Krakow, fully available for hybrid work and the on-call rotation. I would love to discuss how my systems engineering background and customer-focused mindset can ensure the reliability of your global IoT solutions.

Cheers,

Oleh
