Hi,

You can view my full resume here: [Resume \(PDF\)](#)

I have deep experience in IT and Systems administration for creative studios. Over the years, I've managed hardware and software diagnostics, OS provisioning for both Linux and Windows, and automated software deployment across high-performance workstations. I've also architected and administered multi-node on-premise render farms, handling everything from network configurations to remote management and user access.

I'm very comfortable with classic helpdesk tasks and resolving technical problems efficiently. While my background involves a lot of workflow automation and scripting (such as my custom Python pipelines on [GitHub](#)), I'm just as hands-on with standard diagnostic tools, Active Directory, and Microsoft 365. I enjoy handling technical support and ensuring that production pipelines run smoothly.

I'm currently based in Krakow. I am available to work full-time during the week and would love to continue this conversation to see how my IT and systems experience can best contribute to your team at Andea.

Cheers,

Oleh
