Hi,

You can view my full resume here: [Resume \(PDF\)](#)

I have a strong background in IT support, systems engineering, and workflow automation. I specialize in bridging traditional IT with modern DevOps practices, leveraging scripting, containerization, and integrating advanced AI into daily operations to maximize efficiency. You can view examples of my technical code on my [GitHub](#).

While I might not have direct experience in telecommunications, I have deep experience navigating Linux environments, managing workstation lifecycles, and configuring complex systems like multi-node render farms and network storage. I'm comfortable working with relational databases and SQL, having set up and maintained high-availability servers with Docker and GitOps workflows.

I also have hands-on experience integrating frontier and local open-weight LLMs for workflow acceleration, which aligns with your focus on optimizing work using modern AI tools. Additionally, my background includes extensive troubleshooting, system testing, and authoring technical documentation for production pipelines.

I'm based in Krakow, open to foreign assignments, and would love to discuss how my analytical mindset and IT skills can contribute to your implementation team.

Cheers,

Oleh
