

OLEH SYDORYK

Krakow, Poland

Interactive Cover Letter & Portfolio: https://sydoryk.com/coverletter_sydorykoleh_frompolandwithdev

Hi,

You can view my full resume here: [Resume \(PDF\)](#)

I'm writing to express my interest in the Junior Full Stack Developer position at From Poland With Dev. I have a strong foundation in JavaScript, Node.js, and TypeScript, and I've developed my own web applications, including my personal portfolio built with Astro.js and TypeScript, as well as a custom full-stack web application for automated content scheduling. You can view examples of my technical code on my [GitHub](#).

While I'm at the beginning of my commercial software engineering journey, I have solid hands-on experience working with relational databases, SQL, and GitOps workflows. I've maintained high-availability servers using Docker and implemented CI/CD pipelines. I also have practical experience integrating AI into development workflows, having worked extensively with local LLMs and tools like Claude and GPT for coding assistance, which aligns well with your goal of writing backend unit tests using AI.

I'm very eager to learn from your senior developers, dive into your NX monorepo, and expand my React knowledge. I thrive in a "no-politics", efficient environment where I can propose ideas and focus on substantive work.

I'm based in Krakow, available for full-time cooperation, and I would love to discuss how my technical skills and strong drive to grow can contribute to your e-learning product.

Cheers,

Oleh
