Hi,

You can view my full resume here: [Resume \(PDF\)](#)

I have a strong background in IT support, systems administration, and workflow optimization. I am reaching out about the Junior Jira Administrator role because managing complex systems, configuring project tools, and writing clear technical documentation are exactly what I've been doing for years.

In my previous positions, I architected and managed on-premise infrastructures, handled workstation lifecycles, and built custom Python pipelines to automate tedious tasks. You can check out my [GitHub](#) for some examples of my technical work. This experience required an analytical mindset and a lot of direct end-user support—translating daily user problems into structured, configured solutions.

While I haven't been a dedicated Jira administrator before, my experience with project configuration, managing permissions, and general technical troubleshooting is a very strong bridge to the Atlassian ecosystem. I learn quickly and am eager to dig deeper into Jira and Confluence administration.

I'm currently based in Krakow. I would love to continue this conversation so we can figure out how my skills can best support your team at Link Group.

Cheers,

Oleh
