Hi,

You can view my full resume here: [Resume \(PDF\)](#)

I have a solid foundation in programming and scripting, primarily with Python, Bash, and modern web frameworks. I've built various automated workflows, integrated complex APIs, and established CI/CD pipelines using GitHub Actions, Jenkins, and Docker to streamline deployment processes. You can view examples of my technical code on my [GitHub](#).

I'm very interested in the intersection of software and hardware, specifically in test automation and embedded systems within the automotive industry. My background includes rigorous troubleshooting, system testing, and setting up high-availability servers, which I believe translates well to executing tests on virtual platforms or HIL benches.

I am a fast learner and highly motivated to pick up new specialized tools like ECU-TEST and ControlDesk. My analytical mindset allows me to effectively support the development and execution of automated test scripts, analyze test results, and provide detailed defect reporting.

I'd love the opportunity to discuss how my scripting skills and eagerness to learn can contribute to your test automation team.

Cheers,

Oleh
