Hi,

You can view my full resume here: [Resume \(PDF\)](#)

I have deep experience in IT, systems administration, and DevSecOps for creative studios. Throughout my career, I've managed workstation lifecycles (Linux and Windows), troubleshooted complex technical issues, and architected multi-node on-premise infrastructure. This hands-on experience has given me a very solid working knowledge of Linux, networking concepts like TCP/IP, and system-level troubleshooting.

While I might not have direct commercial experience with 3GPP wireless protocols or telecom networks yet, I am highly motivated to learn and expand my knowledge in the telecom domain. I bridge this gap with strong scripting skills in Python and Bash, and hands-on experience with modern technologies like Docker and GitOps workflows, which I use to maintain high-availability network servers. You can check out some of my technical code and automation scripts on my [GitHub](#).

I am currently based in Krakow and available for a hybrid work model. I would love to continue this conversation to see how my IT foundation, problem-solving skills, and curiosity can best support the NMSON Technical Support team at Nokia.

Cheers,
Oleh
