Hi,

You can view my full resume here: [Resume \(PDF\)](#)

Beyond my art background, I have deep experience in IT and DevSecOps, building custom Python pipelines for cross-network file validation and automation. I rely heavily on Houdini and Solaris to automate and scale up data processing, having engineered fully automated pipelines using procedural tools to handle massive amounts of complex information. You can check out my coding work on [GitHub](#).

While I don't have direct experience with QGIS or satellite image analysis yet, my procedural mindset and strong foundation in Python and data pipelines form a solid bridge to this role. My work managing heavy rendering tasks and structuring data in procedural software requires the same strict attention to detail and meticulousness needed for raster and vector data analysis. I'm highly comfortable writing clear technical documentation in English, as I regularly authored pipeline documentation for my previous teams.

I'm currently based in Krakow. I would love to continue this conversation and discuss how my procedural and technical background can best contribute to your data analysis team.

Cheers,

Oleh
