Hi,

You can view my full resume here: [Resume \(PDF\)](#)

I have a strong background in IT, data management, and procedural workflows. I specialize in building robust pipelines, leveraging Python and Bash scripting, and structuring complex data to maximize efficiency. You can view examples of my technical code on my [GitHub](#).

While my background is rooted in system administration and 3D procedural workflows, I have deep experience working with spatial data, rendering engines, and data normalization. My procedural mindset naturally aligns with the rigorous demands of geospatial data processing. I'm highly comfortable preparing large datasets for analysis, writing Python scripts for ETL processes, and meticulously organizing spatial and vector data. Additionally, my strong command of English allows me to seamlessly prepare clear and comprehensive technical documentation.

I also have hands-on experience integrating modern AI models to accelerate workflows, which perfectly complements your focus on automatic object recognition and SAR imagery classification. My background has instilled a strict conscientiousness and meticulousness that I would bring directly to the preliminary analysis, validation, and labeling of imagery. I learn quickly and am eager to dive deeper into QGIS and satellite image analysis.

I'm based in Krakow and would love to discuss how my analytical mindset and technical foundation can contribute to your data analysis team.

Wyrażam zgodę na przetwarzanie moich danych osobowych dla potrzeb niezbędnych do realizacji procesu rekrutacji (zgodnie z ustawą z dnia 10 maja 2018 roku o ochronie danych osobowych (Dz.
