Hi,

I have over 9 years of experience in full CG movie production, real-time visualization, and procedural workflows, primarily working at a lead/supervisor level where I also managed our technical infrastructure.

Beyond art, I have deep experience in IT and DevSecOps for creative studios. I've architected and managed multi-node on-premise render farms, managed workstation lifecycles (Linux/Windows), and engineered custom Python pipelines for cross-network file validation and automation. I am very comfortable with Docker containerization, GitOps workflows, and continuous monitoring systems. You can view some of my technical tools and procedural pipelines on my [GitHub](#).

While I might not have direct experience with Google Cloud Platform, Kubernetes, or large-scale ETL pipelines, I learn quickly and hope you can see my solid foundation in on-premise infrastructure automation and CI/CD as a strong bridge to this role. I can easily adapt my scripting and infrastructure-as-code experience to modern cloud environments.

I am currently based in Krakow and would be happy to work in the hybrid model you mentioned. I am available immediately and would love to continue this conversation to figure out how I can best contribute to your team.

Cheers,
Oleh
