Hi,

You can view my full resume here: [Resume \(PDF\)](#)

I am an adaptable IT and Systems Engineer with a strong background in web development, API integrations, and workflow automation. My technical expertise spans across JavaScript, TypeScript, Python, and modern web frameworks. You can view my technical work and code on my [GitHub](#).

While I might not have direct experience with SAP Fiori, ABAP, or the SAP Finance and Controlling modules, I learn quickly and hope you can see my strong foundation in web technologies and systems engineering as a solid bridge to this role. I am highly comfortable working with complex data structures, APIs, and modern development environments, which I believe will allow me to quickly pick up ODATA services and the SAP Clean Core Approach.

Beyond development, I have deep experience in IT and DevSecOps. I've engineered custom Python pipelines for cross-network file validation, managed workstation lifecycles, and established Git-based version control workflows. My hands-on experience in managing high-availability systems gives me a strong operational perspective that complements development tasks.

I'm currently based in Krakow, Poland. I would love to continue this conversation so we can figure out which of my skills you need the most and how I can best contribute to your team.

Cheers,

Oleh
