Hi,

You can view my full resume here: [Resume \(PDF\)](#)

I'm writing to express my interest in the Junior C++ Developer position at Transition Technologies PSC. While my primary development background is diverse, I have gained exposure to C++ through game development in Unity and Unreal Engine. This experience sparked my interest in lower-level programming and I am now highly motivated to dive deeper into C++ and transition into a more specialized, systems-oriented engineering role.

Although I am newer to commercial C++ development, I bring a very strong foundation in general software engineering principles. I have a solid understanding of object-oriented programming (OOP), design patterns, and relational databases. Furthermore, I am highly comfortable with modern development workflows—I have hands-on experience using Git for version control and leveraging DevOps tools like Docker to build CI/CD pipelines. My background has instilled in me a strong analytical approach to problem-solving and troubleshooting complex technical issues, which I know is crucial when working with legacy codebases in the cybersecurity domain.

I thrive in agile Scrum environments and am eager to collaborate with and learn from an experienced engineering team. I am a fast learner, deeply interested in building advanced cybersecurity solutions, and I have full professional proficiency in English. I am also adaptable and ready to align with SLA-based working hours when required.

I am based in Krakow and would love to discuss how my technical adaptability and strong drive to grow can bring value to your projects.

Cheers,

Oleh
