Krakow, Poland ♦ oleh@sydoryk.com ♦ +48 793 198 675

Lighting & Compositing Artist with 9+ years of experience in CGI. Expert in rendering, lighting pipelines, and look development with a track record of optimizing workflows, leading creative teams, and implementing new technologies.

Lighting & Compositing

- **Lighting & Compositing Workflow:** Designed and implemented studio-wide lighting and compositing pipelines at Attraktion! GmbH. Authored master Nuke templates that standardized the look and streamlined rendering for over 300 production shots and multiple large-scale single-shot media attractions. (2016–2024)

Look Development & Product Visualization

- **Led look development** for a wide range of assets, ensuring artistic consistency and technical readiness across cinematic projects. (2014–2024)
- **Executed high-fidelity product visualizations** for furniture, complex industrial equipment, jewelry, and packaging, establishing physically accurate PBR textures, custom studio lighting rigs, and realistic cloth simulations. (2024–2026)
- **Transformed raw CAD data** into production-ready geometry, maintaining unified lighting styles and visual consistency across extensive product collections. (2024–2026)

Unreal Engine

- **Pipeline Integration** Pioneered the integration of Unreal Engine 5 into the production pipeline; co-developed workflow and pipeline automation alongside the TD and established core project structures. (2023–2024)
- **Lighting** Crafted cinematic lighting and atmospheric effects to establish mood and visual depth across complex environments and individual shots. (2023–2024)
- **Environment & Procedural Art** Led environment creation by generating terrains in Houdini, exporting them to Unreal Landscapes, and utilizing PCG (Procedural Content Generation) for procedural asset scattering. (2023–2024)
- **Technical Art & Materials** Developed master materials utilized across all movie assets, including stylized material effects and volumetric god rays. (2023–2024)
- **Niagara FX** Used Niagara to create complex, stylized transitions between cinematic scenes. (2023–2024)
- **Performance Optimization** Resolved complex engine performance bottlenecks, optimized lighting and rendering configurations, and authored standardized rendering templates and documentation. (2023–2024)

Team Leadership

- **Lighting Team Management** Led a team of junior and mid-level lighting artists, providing technical direction and creative mentorship. Defined the visual baseline for the department, authored comprehensive documentation on pipeline standards, and conducted daily sequence reviews to ensure strict aesthetic consistency. (2020–2024)

Skills

- **Software:** Houdini, Nuke, Substance, Maya, Unreal Engine, Redshift, Arnold
- **Core Areas:** Lighting, Lookdev, Compositing, Environment Building, Visual Direction
- **Programming & Scripting:** Python, VEX
