

OLEH SYDORYK

Krakow, Poland ❖ oleh@sydoryk.com ❖ +48 793 198 675

Adaptable IT and Systems Engineer specializing in infrastructure automation, robust network storage, and local systems administration. Adept at bridging traditional IT support with modern DevOps practices—leveraging Python automation, GitOps workflows, Docker containerization, and advanced AI integration to maximize operational efficiency and system reliability.

IT Support & Systems Management

- **Render Farm Administration:** Architected, configured, and managed multi-node on-premise render farms (2016–2024); optimized resource scheduling and job queues to eliminate processing bottlenecks and ensure 24/7 pipeline uptime.
- **Workstation Lifecycle Management:** Directed hardware/software diagnostics, OS provisioning (Windows/Linux), and automated software deployment across high-performance artist workstations, minimizing creative downtime.

Infrastructure & DevSecOps (Homelab & Production)

- **GitOps & Containerization:** Designed and maintained a highly available personal server infrastructure using Docker and GitOps workflows, successfully migrating core services away from proprietary cloud ecosystems to self-hosted alternatives.
- **Security & Network Storage:** Engineered secure, zero-trust remote access utilizing Cloudflare Tunnels; implemented a strict 3-2-1 backup strategy for network-attached storage.
- **Observability:** Deployed Uptime Kuma to establish continuous infrastructure monitoring, configuring real-time automated alerting to proactively mitigate system degradation.

Programming & Automation

- **Data Pipelines:** Engineered custom Python automation pipelines for real-time directory synchronization and cross-network file validation, ensuring data integrity across distributed storage systems.
- **Asset Management Automation:** Developed Python utilities to batch-process files, programmatically validate legacy path references, and manage large-scale asset libraries across complex project directories.
- **Version Control & CI/CD:** Established Git-based version control workflows, with proper usage of Github Secrets to keep secrets safe.

Web Development & Engineering

- **Personal Portfolio Website:** Designed, built, and actively maintain a highly performant personal portfolio website (sydoryk.com) from scratch. Developed the complete front-end architecture using Astro.js and TypeScript, applying modern web standards and responsive design through HTML, CSS, and Sass to showcase professional projects and technical writing.
- **Content Automation (MultiCast):** Developed a custom web application for automated content publishing and scheduling. Integrated tailored title and description generation capabilities, supporting seamless direct publishing to YouTube, TikTok, Facebook, and Instagram.

AI Engineering & Integration

- **LLM Implementation:** Architected workflows integrating frontier models (Claude, Gemini, GPT) and local open-weight LLMs (DeepSeek, Qwen) for intelligent coding assistance, automated code review, and workflow acceleration.
- **Custom AI Tooling:** Designed and deployed custom AI skills and agentic frameworks, strategically balancing model "planning vs. execution" behaviors to optimize cost, latency, and accuracy based on task complexity.

Technical Skills

- **Programming & Automation:** Python, Shell Scripting (Bash/PowerShell), Git, CI/CD Workflows, Command-line utilities
- **DevOps & Infrastructure:** Docker, GitOps, Cloudflare Zero Trust, Network Attached Storage (NAS), Render Farm Infrastructure

- **Web Technologies:** Astro.js, TypeScript, JavaScript, HTML5/CSS3, Sass, Node.js
- **Operating Systems:** Linux, Windows / Windows Server
- **AI & Intelligent Systems:** Local LLM Deployment, Prompt Engineering, Agentic Workflow Design, Custom Skill Integration
