

OLEH SYDORYK

Krakow, Poland ♦ oleh@sydoryk.com ♦ +48 793 198 675

Adaptable IT and Systems Engineer specializing in infrastructure automation, network storage, and local systems administration. Adept at bridging traditional IT support with modern DevOps practices—leveraging Python automation, GitOps, Docker containerization, and advanced AI integration to maximize operational efficiency.

IT Support & Systems Management

- **Render Farm Administration:** Architected, configured, and managed multi-node on-premise render farms (2016–2024); optimized scheduling and job queues to eliminate bottlenecks and ensure 24/7 pipeline uptime.
- **Workstation Lifecycle Management:** Directed diagnostics, OS provisioning (Windows/Linux), and automated software deployment across high-performance artist workstations, minimizing creative downtime.

Infrastructure & DevSecOps

- **GitOps & Containerization:** Maintained a high-availability home server using Docker and GitOps workflows, successfully migrating core services away from proprietary cloud ecosystems.
- **Security & Network Storage:** Engineered secure, zero-trust remote access utilizing Cloudflare Tunnels and implemented a strict 3-2-1 backup strategy for network-attached storage (NAS).
- **Observability & Monitoring:** Deployed Uptime Kuma for continuous infrastructure monitoring, configuring real-time automated alerting to proactively mitigate system degradation.

Programming & Automation

- **Workflow Automation:** Engineered custom Python pipelines for real-time directory synchronization, cross-network file validation, and automated path fixing across large asset libraries.
- **Version Control & CI/CD:** Established Git-based version control workflows and integrated GitHub Secrets to ensure secure, automated credential and environment variable management.

Web Development & Engineering

- **Personal Portfolio Website:** Developed a high-performance portfolio (sydoryk.com) using Astro.js and TypeScript, applying responsive design with modern HTML, CSS, and Sass.
- **Content Automation (MultiCast):** Built a custom web application for automated content scheduling and publishing, integrating text generation APIs and direct pipelines to major social platforms.

AI Integration & Automation

- **LLM Implementation:** Architected workflows integrating frontier models (Claude, Gemini, GPT) and local open-weight LLMs (DeepSeek, Qwen) for coding assistance and workflow acceleration.
- **Custom AI Tooling:** Deployed custom AI skills and agentic frameworks, strategically balancing model planning versus execution to optimize cost, latency, and accuracy.

Technical Skills

- **Programming & Automation:** Python, Shell Scripting (Bash/PowerShell), Git, CI/CD Workflows
- **DevOps & Infrastructure:** Docker, GitOps, Cloudflare Zero Trust, NAS, Render Farm Infrastructure
- **Web Technologies:** Astro.js, TypeScript, JavaScript, HTML5/CSS3, Sass, Node.js
- **Operating Systems:** Linux (Ubuntu/Debian/RHEL), Windows / Windows Server
- **AI & Intelligent Systems:** Local LLM Deployment, Prompt Engineering, Agentic Workflows
