Hi,

You can view my full resumes here: [LRC Resume \(PDF\)](#) | [Technical Artist Resume \(PDF\)](#)

I have over 9 years of experience in full CG movie production, real-time visualization, and procedural workflows, primarily working at a lead/supervisor level.

I rely heavily on Houdini, Solaris, and OpenUSD to automate and scale up asset production. I've engineered fully automated pipelines using Houdini TOPs for massive product visualization batch rendering, and I'm very comfortable working with USD composition, layers, and variants. I treat asset libraries like production code and understand the importance of technical correctness, consistent hierarchies, and clean metadata over just making things look pretty.

Beyond art, I have deep experience in IT and DevSecOps for creative studios. I've architected and managed multi-node on-premise render farms, managed workstation lifecycles, and engineered custom Python pipelines for cross-network file validation and automation. This background helps me run and debug generation batches reliably, ensuring predictable delivery.

While my recent professional work has been heavily focused on Maya and Houdini rather than Blender daily, I learn quickly and hope you can see my strong foundation in Python pipelines, procedural workflows, and OpenUSD as a strong bridge to this role. I can easily switch to Blender and adapt to your existing SimulationApp pipeline.

I'm currently based in Krakow, Poland. I would love to continue this conversation so we can figure out which of my skills you need the most and how I can best contribute to your team.

Cheers,

Oleh
