Hi,

I have over 9 years of experience in full CG movie production, real-time visualization, and procedural workflows, primarily working at a lead/supervisor level.

At my previous position, I led the transition of our traditional rendering pipeline to Unreal Engine 5. We produced multiple attractions and movies entirely in Unreal. I was responsible for performance optimization, pipeline integration, building procedural environments using PCG, and creating complex stylized FX. Here is an example of an Unreal project where I handled both the FX and cinematic lighting: <https://sydoryk.com/detail/SunnyBunny>

Beyond art, I have deep experience in IT, Systems Engineering, and AI integration. I've engineered custom Python pipelines for cross-network automation, managed Docker containerization, and architected workflows integrating frontier AI models. I rely heavily on procedural tools like Houdini to automate massive asset generation and data processing workflows. You can view some of my code here: [GitHub](#).

While I might not have direct experience with Unity or specific SCADA systems, I learn quickly and hope you can see my strong foundation in real-time engines, procedural automation, and DevSecOps as a strong bridge to this role. I can easily switch to Unity, C#, and your preferred communication protocols as needed.

I'm currently based in Krakow, Poland. I would love to continue this conversation so we can figure out which of my skills you need the most and how I can best contribute to your team.

Cheers,
Oleh
