Hi,

I have over 9 years of experience in full CG movie production, real-time visualization, and procedural workflows, primarily working at a lead/supervisor level.

At my previous position, I led the transition of our traditional rendering pipeline to Unreal Engine 5. We produced multiple attractions and movies entirely in Unreal. I was responsible for the lighting workflow, building procedural environments using PCG, and creating complex stylized FX with Niagara. Here is an example of an Unreal project where I handled both the FX and cinematic lighting: <https://sydoryk.com/detail/SunnyBunny>

While my recent background is more in cinematic productions and procedural pipelines using Houdini and Maya, I regularly use Blender and Substance Painter for asset creation and PBR texturing. I'm very comfortable modeling mid-to-low poly stylized assets, preparing props, and optimizing them for Unreal Engine or Unity. I hope you can see my strong foundation in real-time engines and asset optimization as a strong bridge to this role.

I'm currently based in Krakow, Poland. I would love to continue this conversation so we can figure out which of my skills you need the most and how I can best contribute to your team.

Cheers,
Oleh
