Hi,

I have over 9 years of experience in technical environments, managing everything from workstation lifecycles to network infrastructure, primarily working to support creative production teams.

Beyond art, I have deep experience in IT and DevSecOps for creative studios. I've architected and managed multi-node on-premise render farms, managed workstation lifecycles (Windows and Linux), and provided patient user support for artists who needed everything to just work. I am also familiar with virtualization and NAS administration, having implemented strict backup strategies on network-attached storage arrays.

While my background is heavily tied to CGI production, a large part of my daily work has always been infrastructure management, resolving hardware and software issues, and ensuring maximum uptime. I learn quickly and hope you can see my strong technical foundation and independence as a great bridge to this Junior System Administrator role. I am very comfortable working with Windows 10 and 11 environments, and eager to handle Windows Server and Proxmox administration.

I'm currently based in Krakow, Poland. I am currently available and interested to discuss the position in more detail.

Cheers,
Oleh
