Hi,

I have over 9 years of experience in CG production, real-time visualization, and procedural workflows, often working at a lead level.

Beyond my art background, I have deep hands-on experience in IT and systems management for creative studios. I've managed workstation lifecycles, taking care of hardware diagnostics, OS provisioning for both Windows and Linux, and setting up automated software deployments. I'm very comfortable diagnosing technical problems with computers, networks, and system access. Over the years, I've also architected and maintained multi-node on-premise render farms, keeping the infrastructure running smoothly and minimizing downtime.

While I might not be a traditional computer science student, I learn very quickly and hope my strong foundation in technical support, networking, and hardware repair serves as a great bridge to this role. I also have experience creating technical documentation and automating workflows with Python.

I'm currently based in Krakow, Poland, and the Feliksa Wrobela Street 3 location works perfectly for me. I am currently available and would love to discuss the position in more detail to see how I can best support your IT department.

Cheers,
Oleh
