Hi,

I have over 9 years of experience in systems administration, IT infrastructure, and technical support, primarily working in high-performance production environments.

I have deep experience in IT and DevSecOps for creative studios. I've architected and managed multi-node on-premise server infrastructures, managed workstation lifecycles across Linux and Windows, and engineered custom Python pipelines for cross-network file validation and automation. For security and business continuity, I've implemented strict 3-2-1 backup strategies for network-attached storage and deployed Uptime Kuma for continuous infrastructure monitoring and automated alerting.

When it comes to user support, I'm highly comfortable diagnosing hardware and software issues. I've directed OS provisioning and automated software deployment across entire teams to minimize downtime, and I'm very familiar with managing user accounts, network environments, and Microsoft 365 setups.

While I might not have direct experience with ERP Dynamics Business Central, I learn quickly and hope you can see my strong foundation in systems administration, Active Directory, and infrastructure as a strong bridge to this role. I can easily pick up new software and systems as needed.

I'm currently based in Krakow. I would love to continue this conversation so we can figure out which of my skills you need the most and how I can best contribute to your team.

Cheers,
Oleh
